CODING**
THEFT PREVENTION

SECURITY CODING THEFT PREVENTION

is a vehicle security measure that involves etching or lasering a unique identification number on glass surfaces or a specific body panel.

This number is registered in a national database and serves as a theft deterrent.

Here's why this system works on both glass and body panels:

DETERRENCE: Thieves are less likely to target a car that's marked and traceable. Security coded windows or panels make it harder and more expensive to sell the vehicle or its parts.

TRACEABILITY: Law enforcement can use the registered number to identify a recovered stolen vehicle—even if the VIN, plates, or registration stickers are missing.

REPLACEMENT HASSLE: Security coded glass or marked panels increase the difficulty and cost for thieves trying to conceal the vehicle's identity.

In 2024 alone, over 850,000 vehicles were reported stolen, translating to a vehicle being stolen approximately every 37 seconds.

WHAT IS SECURITY CODING?

Vehicle security coding uses a stencil and acid, or a laser, to permanently mark your vehicle's glass or body panels with a unique Vehicle Identification Number (VIN) or a traceable code.

FINANCIAL PROTECTION

WHEN YOU NEED IT MOST

In the event the Theft Deterrent System installed on the Vehicle fails to prevent it from being stolen during the term of the contract, or if the Vehicle is declared a Total Loss as a direct result of the theft, we will pay you a financial benefit (see your contract for details).

BONUS: Your vehicle may also qualify for a comprehensive insurance discount!
